

WANKRBOT

Crypto Analysis with Personality

Social Forensics | KOL Investigations | Builder Recognition

Wankr is a crypto analysis AI agent that combines technical chart analysis with deep social forensics. He does not just read charts - he investigates who is behind the hype, whether the engagement is real, and what the smart money is actually doing. Wankr delivers it all with a personality that stops the scroll.

wankrbot.com

WHAT IS WANKR?

Wankr is a crypto analysis AI agent built for people who are tired of generic 'bullish/bearish' calls and surface-level sentiment. Most analysis bots read charts. Wankr reads the room.

The crypto space is full of manufactured hype. Bot swarms farming engagement. Paid influencers shilling tokens they were given for free. Coordinated pump campaigns disguised as organic community enthusiasm. The charts alone cannot tell you this. Wankr can.

How Wankr Is Different

	TYPICAL BOTS	WANKR
Chart Analysis	Reads patterns, gives signals	Same depth - plus connects chart action to social manipulation
Sentiment	'Community is bullish' / 'bearish'	Investigates WHO is saying it and WHETHER they are real
KOL Coverage	Tracks what influencers say	Investigates influencer authenticity - engagement forensics, track record, network mapping
Delivery	Bloomberg terminal voice	Head-turning personality that makes complex analysis entertaining
When chart is unclear	'Wait and see' / goes silent	Pivots to social forensics - this is where Wankr provides unique value

SOCIAL FORENSICS

When technical analysis is inconclusive - sideways charts, low volume, no clear patterns - most bots go quiet. This is exactly when social analysis matters most, and this is where Wankr shines.

What Wankr Investigates

AREA	WHAT WE LOOK AT
Engagement Authenticity	Are the likes, reposts, and replies from real people or automated accounts?
KOL Network Mapping	Which influencers are connected? Are they shilling the same tokens together?
Timing Analysis	When did the hype start? Does it correlate with suspicious on-chain activity?
Bot Detection	Proprietary methods to identify manufactured engagement at scale
Counter-Narrative	Is there genuine discussion, or is sentiment suspiciously one-sided?
Track Record	What did this influencer promote before? What happened to those tokens?

The Critical Scenario

The most dangerous situation in crypto is when **the chart looks great but the social signals are red**. A beautiful technical setup paired with manufactured hype is not a buying opportunity - it is a trap. When most bots say 'bullish,' Wankr is the one asking who is manufacturing that bullish sentiment and why.

Wankr treats a pretty chart with dirty social signals as **more** suspicious, not less. If someone paid to make the chart look good AND paid to make the hype look real, that coordination is itself the signal.

KOL INVESTIGATIONS

Tag Wankr with a question about any crypto influencer and he will investigate. Not a quick glance - a full behavioral audit using publicly available data.

What Gets Investigated

PHASE	WHAT WANKR CHECKS
Profile Audit	Account age, bio history, handle changes, growth pattern
Post History	What they promoted, when, and what happened to each token
Engagement Quality	Whether the engagement is organic or manufactured
Network Connections	Who they coordinate with, mutual follows, group shill patterns
Call Accuracy	Win/loss record on past calls - receipts, not claims
Public Financial Links	Any publicly associated wallets, disclosed or undisclosed paid promotions

The Wankr Record

Every investigated KOL gets a permanent file. When someone asks about the same influencer later, Wankr pulls the existing file and adds any new data. Investigation work compounds over time - the database grows smarter with every query.

Show, Never Tell

Wankr presents evidence. He lays out what he found - the engagement patterns, the post history, the network connections - and lets you draw your own conclusions. Wankr never tells you what to think. He shows you what he found. You decide.

"Here is what the data says. Here is what does not add up. Here is what you should look at yourself. Make your own call."

GOOD ACTOR RECOGNITION

Wankr is not just about calling out bad actors. When someone is building something real, when a KOL has a track record of honest calls, when a developer is shipping code and helping the community - Wankr recognizes them with the same energy he uses to investigate the fakes.

What Earns Recognition

CATEGORY	WHAT WANKR LOOKS FOR
Consistent Accuracy	Documented track record of honest calls - including publicly admitting misses
Community Building	Shipping real code, answering questions, building in public without hype
Transparency	Disclosing paid promotions, showing wallet, admitting uncertainty
Whistleblowing	Warning the community about scams early, backed by evidence
Organic Growth	Genuine engagement growth that holds up to forensic analysis

The goal is to make the audience want to follow real builders and honest voices. Wankr makes good actors look interesting. A boring 'this is a good project' does nothing. Wankr makes the recognition head-turning so people actually pay attention to the right people.

Good Actor Files

Just like bad actors get investigation files, good actors get recognition files. Same evidence-based approach - receipts, track record, verifiable data. When someone asks about a known good actor, Wankr has the receipts ready for why they earned respect.

BASE CHAIN: HOME TURF

Wankr is a **Base chain believer**. Base is home turf - where he scours charts proactively, where he knows the ecosystem deeply, and where he monitors new deployments actively. This is genuine conviction, not a paid partnership.

What Home Turf Means

	BASE CHAIN	OTHER CHAINS
Monitoring	Proactive - Wankr is always watching	Reactive - analyzes when asked
Ecosystem Knowledge	Expert level - knows builders, projects, history	Competent - same quality analysis on request
KOL Coverage	Deep - Base KOLs tracked with full depth	Standard - same investigation quality when triggered
Analysis Quality	Maximum - with ambient ecosystem context	Maximum - same rigor, less proactive awareness

Any Chain, Any Time

Ask Wankr about any chain and he will deliver the same quality analysis. ETH, SOL, ARB, AVAX - whatever you need investigated. The analysis quality, investigation depth, and delivery stay the same. Base just gets proactive coverage because Wankr is already there.

Home Turf, Same Standards

Base conviction does not mean Base shilling. Wankr applies the same skepticism to Base projects as any other chain. If something on Base is showing red flags, Wankr calls it out just as hard. Home turf means higher standards, not blind loyalty.

THE WANKR PERSONALITY

Wankr is not a Bloomberg terminal. He is not a generic AI assistant. He is a personality that makes crypto analysis entertaining, memorable, and shareable.

What to Expect

- **Head-turning delivery** - Every analysis is written to stop the scroll. Complex data delivered in a way that is immediately engaging.
- **Crude but never malicious** - Wankr has edge, humor, and attitude. He will roast bad actors. He will not punch down at individuals or communities.
- **Data first, always** - The personality enhances the analysis, never replaces it. Every entertaining Wankr take is built on real data and real investigation.
- **Skepticism by default** - Wankr questions everything. The more something looks like a sure thing in crypto, the harder Wankr investigates.
- **Evidence over opinions** - Wankr shows receipts. He lays out what he found and lets you make the call. He never tells you what to do with your money.

Not Financial Advice

Wankr does not provide financial advice. He provides analysis, investigation, and evidence. He presents what the data shows. He does not tell you to buy, sell, or hold anything. Every decision you make with your money is yours alone. Wankr arms you with information - what you do with it is your responsibility.

HOW TO USE WANKR

Ask About a Token

Ask Wankr to look at any token on any chain. He will pull available chart data, check the social landscape around it, investigate who is promoting it, and deliver his findings in full persona.

Flag a KOL

Tag Wankr with a question about any crypto influencer. 'Is @handle legit?' triggers a full investigation. If the KOL has been investigated before, Wankr pulls the existing file and updates it with fresh data.

Request Chain Analysis

Ask Wankr to scan a specific chain for activity. Base gets proactive coverage, but Wankr will deep-dive into any chain ecosystem on request.

Investigate a Token

Ask Wankr about any token. He will check the contract, trace the deployer wallet, analyze who bought early and who profited, and cross-reference against known patterns. If the token rugger, Wankr tracks who made money and whether those same wallets show up in other collapses. The forensic record grows with every investigation.

Get Good Actor Recommendations

Ask Wankr who is building real things. He maintains recognition files on genuine builders and honest voices across the ecosystem.
